

REAL POWER

RealPower is the only home-trainer in the world that can correctly simulate any slope gradient. The innovative technology of the resistance unit is capable of simulating any hill climb, even the most breathtaking ones of the Giro and the Tour.

Your PC communicates with the trainer, varying the amount of resistance according to the gradient, speed and rider weight. The images are coordinated to the resistance unit reflecting real world conditions as you ride through different courses.

View personal ride stats, like speed, distance, ride-time, cadence, heart rate and power together with the images of famous courses.

The extra large flywheel offers a smooth pedaling stroke even with out-of-ordinary slope gradients.

Features:

Resistance Unit

- Magnetic powder resistance unit controlled by an electronic device that regulates the current output.
- 45mm diameter Elastogel roller reduces noise and tyre wear and improves traction.
- Extra large flywheel offers more than 250% greater inertial momentum than standard RealAxiom.
- Unlimited resistance. RealPower is able to reproduce faithfully the steepest slopes even at low rpm's.
- 5 DVD video races
- 40 Axiom courses
- Conconi and training test
- Vista compatible.
